

# Using Rattler & Cobra with Rope or Tie-Down

Thank you for choosing Snobunje  
**RATTLER & COBRA.**

**Step 1.** Attach a Snobunje device to the ski loop of the stuck snowmobile. Then, using the rope and/or tie-down strap connect Snobunje to a stationary object such as another snowmobile, tree, etc.

**Step 2.** Next, pull the rope or tie-down strap in order to stretch Snobunje. Secure the rope.

**Step 3.** Finally, the driver stands beside their machine and throttles it until the sled pushes forward, freeing itself.

## **WARNING!!!**

Snobunje tools are for snowmobile use ONLY.

Do NOT use as a towing device.

Do NOT use if worn or damaged.

Do not exceed 1500 lbs. of pulling force.

# Using Cobra and Another Snowmobile

Thank you for choosing **SNOBUNJE COBRA**.

**Step 1.** Establish a trail around the stuck sled. This may take several passes and it is important to remember that each situation is different and to use the approach that is to your best advantage. Attach Snobunje Cobra, leaving some slack, to the ski loop of the stuck snowmobile and the tow bar of an assisting snowmobile. (For best results we recommend installing a trailer hitch to your snowmobiles).

**Step 2.** The assisting snowmobile slowly moves forward with just enough momentum to avoid spinning their track, and sets their brake. Cobra will stretch to approximately 6 ft. and will hold 300 to 400 lbs. of pulling force.

**Step 3.** They then dismount their sled and attach Snobunje Rattler to a ski on the stuck sled. Using **Method #1** the assistant adds another pulling force to the effort. With the Cobra holding an unattended pulling force and the assistant with the Rattler adding their force, the stuck snowmobiler throttles their sled, moving forward and to the side of the assistant. Whether using another sled or a tree as a dead man, or turning a stuck sled on a deep slope (we recommend hooking the uphill ski), Cobra can allow application of forces that you otherwise could not use..

## **WARNING!!!**

Snobunje tools are for snowmobile use ONLY.  
Do NOT use as a towing device.  
Do NOT use if worn or damaged.  
Do not exceed 1500 lbs. of pulling force.
